Best Value:

Our Combined Extended Warranty and Planned Maintenance

Customer Benefits - Warranty and Planned Maintenance Options to meet your service level, budget and facility requirements.

Equipment Benefits- Warranty Programs designed to meet recommended needs of equipment and product specifications.

Warranty Options

Clifford Power Systems®, Inc. Sales and Service personnel can discuss a number of options available to meet the specific needs of your organization. Warranty options generally cover any defect in materials and workmanship.

Options will vary based on equipment and product specifications.

Generator Set & Automatic Transfer Switches

5 years/3,000 hours - whichever occurs first.

Extended Warranty Benefits

The fundamental benefits of purchasing a generator set warranty are peace of mind and reduced exposure to unforeseen maintenance costs.

Clifford Power Systems® Inc have earned a reputation for providing premium power systems backed up by premium service. The systems we supply and service are designed and manufactured to give a high standard of reliability. However, the most reliable electrical and mechanical systems may have unscheduled shut downs due to component failure.

A well designed and installed system, IF PROPERLY MAINTAINED, rarely fails, but if it does the unforeseen downtime and repair costs can significantly impact operational expenses and risks.

System managers purchase extended warranty to ensure on-going protection of critical loads, and to ensure operational costs can be kept within budget, even when an unscheduled non-performance event occurs.

Budgeting for the Unexpected

The Clifford Power Systems®, Inc. warranty to standby generator set systems owners, ensures that their system is fully covered for failures due to unforeseen manufacturing and material defect.

The most significant advantage of an extended warranty program, is the peace of mind gained from knowing you are covered for unexpected repairs.

Other advantages of an extended warranty are reliability, expense control and regular system maintenance* when combined with regular planned maintenance.

Generator systems designed today benefit from improvements in technology. Those gains are balanced by more complex and sensitive systems which can lead to more expensive parts and repair costs. Improperly maintained systems can experience catastrophic failure.

Just as with other capital equipment, protecting vital company assets, through an investment in an extended warranty is a key service differentiator our customers have come to expect.

** See extended warranty document for a complete list of exclusions subject to change.*

The Clifford Service Advantage:

Customer Service • We file claims • No surprises • No up front payment, then waiting for claim reimbursement
